Web Engineering Assignment-01

HTML and CSS Fundamentals

DEADLINE: 26TH OCT MONDAY, 2026 1ST LECTURE

ANY KIND OF CHEATING WILL RESULT IN 0.

Instructions

- Attempt all questions. Write your answers neatly on paper.
- For code questions, write properly indented code. Marks are given for correct tags, attributes and syntax.

Section A: Short Questions (20 marks)

Answer each question in 1 to 3 lines. Each question carries 2 marks.

1. What is an unpaired (empty) tag? Give two examples. **[2]**

2. Write the line of code that starts an ordered list from the number 5. **[2]**

3. Which attribute and value make an ordered list show lowercase Roman numerals (i, ii, iii)? **[2]**

4. What is a page-jump link? Write one example of the link and the bookmark it jumps to. **[2]**

5. Write the line of code for a link that opens the visitor's email application. **[2]**

6. Which form control lets the visitor choose only one option from a group? How do you make several of them belong to one group? **[2]**

7. What is the use of the <iframe> tag? Write its basic syntax with the src, width and height attributes. **[2]**

8. Write the four HTML tags used to build a table (table, row, heading cell, data cell) and say what each one does. **[2]**

9. How do you select an element in CSS by its ID and by its class? Write one rule for each. **[2]**

10. What is the difference between margin and padding in the box model? **[2]**

Section B: Long Questions (30 marks)

Answer each question in full. Each question carries 5 marks.

11. Lists in HTML. **[5]**

- (a) Name the three types of HTML lists and write the tags used to create each one. (2)
- (b) What do the type, start and value attributes do in an ordered list? (1)
- (c) Write the code for an ordered list of three fruits that starts from 5 and uses lowercase letters. (2)

12. Hyperlinks. **[5]**

- (a) Explain the four kinds of hyperlinks: page-jump, internal, external and email. Write one example line of code for each. (4)
- (b) Which attribute makes a link open in a new browser tab? (1)

13. CSS sources and the cascade. **[5]**

- (a) Explain inline, embedded and linked (external) CSS. Which one is best for a website with many pages, and why? (3)
- (b) Look at the code below. Which colour will the paragraph be? Explain using the order of the cascade. (2)

```
<!-- style.css (linked) -->   p { color: red; }

<head>
  <link rel="stylesheet" href="style.css">
  <style> p { color: blue; } </style>
</head>
<body>
  <p style="color: green;">Welcome students</p>
</body>
```

14. The box model and layout. **[5]**

- (a) Calculate the total horizontal space this box takes on the page, including its margin. Show your working. (2)

```
.box {
  width: 150px;
  padding: 10px;
  border: 2px solid black;
  margin: 15px;
}
```

- (b) Explain in words what this code does to the three div elements. Why is the last line needed? (3)

```
<div id="left">Menu</div>
<div id="right">Content</div>
<div id="footer">Footer</div>

#left   { float: left;  width: 30%; }
#right  { float: right; width: 70%; }
#footer { clear: both; }
```

15. Debugging, tables and images. **[5]**

- (a) This HTML has three mistakes. Find them and write the corrected code. (3)

```
<table border="1">
  <td>Name</td><td>Age</td>
</table>
<img src="logo.png">
<p><b>Welcome <i>students</b></i></p>
```

- (b) Write one line of HTML that displays an image called photo.jpg, 200 pixels wide and 150 pixels high, with suitable alternative text. (2)

16. Forms. **[5]**

Write the HTML for a registration form that has: a text box for name, a password field, radio buttons for gender, two checkboxes for hobbies, a drop-down list of three cities, a textarea for comments, and Submit and Reset buttons. Use the form tag with the action and method attributes.
